Education

University of Waterloo

Bachelor of Mathematics, Computational Mathematics

Relevant Coursework: Calculus, Linear Algebra, Algebra, Designing Functional Programs

Sep 2024 – Apr 2029

GPA: 3.7/4.0

Skills

Programming: Python, JavaScript, SQL, C, C++, C, Racket

Frontend: React, Vite, HTML, CSS

Backend & Data: Flask, Supabase, REST APIs, Data Processing

Tools & Platforms: n8n, WordPress, Figma, Git

Experience

Technical Marketing Intern (Full-Stack & Automation)

Aug 2025 – Mar 2026

Emerson Test & Measurement (formerly National Instruments), Shanghai, China

- Designed and implemented a full-stack internal system for configuring NI hardware, enabling interactive system setup and validation.
- Implemented backend logic for real-time performance computation, improving accuracy of power estimation and compatibility checks.
- Built backend data pipelines for software revenue and service analysis, improving data accessibility and system evaluation.
- Designed relational data models and integrated Supabase, enabling efficient data storage and querying.
- Developed an internal forum module to support knowledge sharing, improving cross-team collaboration.
- Created AI-powered automation workflows using n8n and Python, reducing manual effort in subtitle translation.
- Integrated automation pipelines with data workflows, improving efficiency and reducing manual operations.
- Co-developed technical documentation with engineers using Figma, improving usability of user-facing materials.
- Supported planning and execution of large-scale technical events (e.g., NI Days), improving coordination across teams.

Product Manager Assistant (Part-time)

Jan 2026 – Apr 2026

Shanghai Yuanmou Medical Technology Co., Ltd., Shanghai, China

- Designed and implemented a CRM and project management system, enabling structured tracking of clients and projects.
- Modeled relational data structures, improving organization of client, project, and task workflows.
- Built automation pipelines for task reminders and milestone tracking, reducing manual coordination.
- Implemented rule-based triggers (e.g., stalled deal alerts), improving responsiveness in sales workflows.
- Developed dashboards to monitor client leads and project value, supporting data-driven decisions.

Web Developer (Part-time, Full-Stack)

Jan 2026 – Present

IS Canada, Remote

- Built a full-stack company website using React and WordPress, improving usability and maintainability.
- Implemented authentication and login, enabling secure access to user-specific features.
- Built a questionnaire system with automated processing and email delivery, reducing manual handling.
- Integrated a WordPress CMS, enabling non-technical users to update content dynamically.
- Designed flexible content update mechanisms, improving adaptability to changing business needs.

Piano Instructor (Part-time)

Jan 2026 – Apr 2026

Self-employed

- Taught beginner-level piano lessons in English and developed personalized lesson plans.

Projects

Helldivers Interactive Web System

Aug 2025 – Present

React, Vite, JavaScript, CSS

Link: wearehelldivers.xyz

- Built an interactive web app inspired by Helldivers, creating a system-style interface with dynamic interaction.
- Designed a modular React architecture with reusable components and state management, improving UI scalability.
- Implemented game-style interaction logic, replacing click-based UI with character-driven flows to enhance user experience.
- Developed reusable UI components and layout systems, improving consistency and maintainability.
- Integrated Vite, npm scripts, and ESLint to streamline development workflow and ensure code quality.
- Structured interaction logic using state-driven patterns to manage dynamic UI flows.
